

3/2 SIMULATION VALVE WITH TEST CONNECTION

To meet VdTÜV-MkBl 742 requirement, WABCO introduces a 3/2 way valve with a test connection for the simulation of the pneumatic LSV (load sensing valve) function.

From August 2017 all newly built vehicles* and vehicles operated in Germany* must be equipped with test connectors in the line between port 5 of the T-EBS modulator and the air bellows. This will allow simulating different loads (in accordance with **ECE-R13** Annex 5.1.4.2.2. test requirements).

* All trailers which are subject only to single release / approval.

FUNCTION

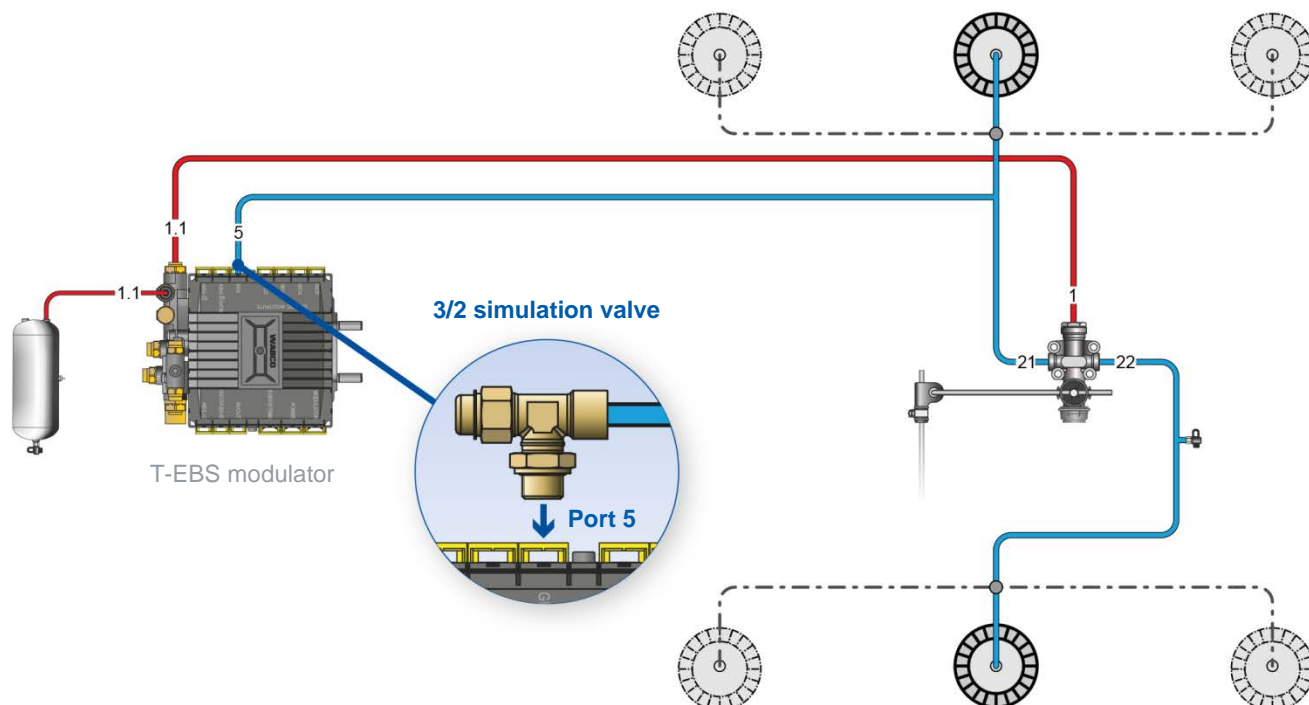

The use of a pressure regulator connected to the 3/2-way valve makes it possible to simulate the control pressure at the T-EBS modulator (port 5) to test the braking performance in different load settings (input / output according to load sensing setting).
