SAFETY FIRST

MAXX™22 is equipped with a new monoblock brake calliper and a reinforced single-piston clamping unit which allows highest braking torques of up to 30,000 Nm to ensure maximum driving safety.

FUEL SAVING

The remarkably light weight of 39 kg, including brake pads, relieves stress on the chassis and reduces fuel consumption, increasing transport efficiency and helping to protect the environment.

PROVEN TECHNOLOGY

The MAXX™22 spare parts concept has been developed on the basis of the proven PAN™ series concept.

Easy installation

Specific hold-down springs fixed to the brake pads ensure that the pads are secured in position to facilitate installation.

Replacement flexibility

Both the de-adjuster unit and the continuous wear sensor (CWS) can be replaced separately. Also the pressure plate is available as a spare part and is easy to replace.

Dedicated tooling

A new tool concept with specific kits for the MAXX™22 series is now also available from WABCO. Tooling is universal and its extended content ensures that it can be adapted to other WABCO brakes.
